Software Engineer | Forward Deployed Engineer | AI Engineer | Open to Relocate

Professional Summary

Full-stack Backend and Agentic AI Engineer with 6 years building software and 3+ years owning production systems in fintech and mobility. Embedded with HDFC Bank to ship payment infrastructure end to end. Scaled checkout APIs to 6,000+ daily transactions at SIXT. Currently building and deploying agentic AI systems using LangChain, LangGraph, and RAG pipelines. Strong in Java, Python, Kafka, distributed systems, and client-facing technical delivery. M.Eng Stevens Institute of Technology, 4.0 GPA. Open to SDE, Forward Deployed Engineer, and AI Engineer roles.

Technical Skills

Languages: Java, Python, C++, JavaScript, TypeScript, Kotlin, SQL, Bash, HTML5, CSS3

Backend: Spring Boot, Node.js, Express.js, REST API Design, Microservices, Event-Driven Systems, gRPC basics, JWT, OAuth 2.0

Agentic AI: LangChain, LangGraph, RAG Pipelines, LLM Tool Use, MCP, OpenAI API, FAISS, Pinecone, RAGAS Evaluation, Prompt Engineering

Data and Streaming: Apache Kafka, PostgreSQL, MongoDB, Redis, MySQL, Firebase, ETL Pipelines, Data Modeling, NoSQL

Cloud and DevOps: AWS (EC2, S3, Lambda), GCP basics, Docker, Kubernetes, Jenkins, CI/CD, Prometheus, Grafana, SonarQube

Practices: System Design, Agile, Scrum, Full SDLC, Code Reviews, Technical Mentorship, DevSecOps, Git, Jira, Confluence

Professional Experience

Graduate Student Engineer

Jan 2025 – May 2026

Stevens Institute of Technology

Hoboken, NJ, USA

- Completed M.Eng in Engineering Management (GPA 4.0) while shipping three production-grade agentic AI systems alongside coursework in system design, product management, and Agile leadership.
- Served as Master's Student Representative on the Academic Operations and Affairs Committee; supported admissions outreach as a Graduate Student Ambassador using CRM-driven engagement strategies.

Software Engineer

Sep 2023 – Jan 2025

Vymo - Fintech SaaS, Enterprise Sales Intelligence Platform

Bengaluru, India

- Embedded directly with HDFC Bank stakeholders to run technical discovery sessions, design payment aggregator architecture from scratch, and own delivery end to end, unlocking 90% of their collection suite and enabling real-time payment processing and reconciliation.
- Led a cross-functional team of 5 engineers through requirements definition, architecture design, implementation, testing, and production deployment of a settlement module, delivered on schedule through Agile/Scrum execution.
- Reduced end-to-end API latency by 40% by profiling Java/Spring Boot microservices, eliminating redundant inter-module calls, optimizing SQL and NoSQL database queries, and applying Redis request-level caching.
- Improved production observability by integrating Prometheus-based monitoring and structured alerting, reducing mean time to detect production incidents by 30%.
- Conducted structured code reviews across backend services, enforcing engineering standards and reducing post-release defects across the team.

Software Development Engineer

Mar 2022 – Jul 2023

SIXT Research and Development - Global Mobility and Car Rental Technology

Bengaluru, India

- Engineered configurable REST APIs for the Digital Checkout Service within a Java/Spring Boot microservices architecture, increasing checkout adoption from 2% to 6% and supporting 6,000+ daily transactions.
- Implemented Redis-based request-level caching across high-frequency checkout paths, reducing downstream service load and cutting API response times to under 300 ms.
- Designed and deployed Apache Kafka funnels for asynchronous validation chaining and event tracking, decoupling business logic from the request path and reducing service-level latency by 30–40%.
- Built comprehensive unit and integration test suites using JUnit and Mockito; integrated SonarQube into Jenkins CI/CD pipelines, raising test coverage from near zero to 80%.
- Collaborated across product, QA, infrastructure, and engineering teams through all SDLC phases including requirements, design, coding, testing, UAT support, and production deployment.

- Platform Security and Development Engineer**
Brane Enterprises Pvt. Ltd. - Enterprise Technology Solutions

Jul 2021 – Dec 2021
Hyderabad, India
- Identified 11 security vulnerabilities across enterprise platform components through manual penetration testing and automated scanning using Metasploit and Wireshark, reducing attack surface by 50–60%.
 - Integrated SAST and DAST security scans into CI/CD pipelines and enforced OWASP guidelines across the SDLC, establishing DevSecOps practices adopted by engineering leadership.
- Android App Development Intern**
JSW Pvt. Ltd. - Steel and Infrastructure Conglomerate

Mar 2021 – May 2021
Bellary, India
- Developed a Kotlin-based internal Android application replacing a legacy employee service access system, achieving a 70% reduction in access latency and improving cross-team adoption.
- Android App Developer**
Schaffen Softwares

Aug 2020 – Feb 2021
India
- Built and shipped a Kotlin utility application with QR code generation, QR scanning, and real-time text translation features; promoted within 3 months for consistent delivery quality and UI contributions.

Projects

- Career Reboot** – Agentic AI job search automation system

Python, LangChain, LangGraph, FastAPI, PostgreSQL, Claude API
- Architected and deployed a multi-agent job search system using LangGraph where a coordinator agent orchestrates specialized sub-agents: one parses live job postings and scores fit against a structured profile, another performs ATS keyword gap analysis per JD, and a third generates tailored cover letters and outreach drafts autonomously.
 - Built resume evaluation pipeline that extracts text from uploaded PDFs, runs semantic comparison against JD requirements using embeddings, surfaces missing keywords, and produces a structured fit report with actionable improvement suggestions.
 - Deployed FastAPI backend persists application state, tracks recruiter conversations, and surfaces pipeline analytics; the system has processed real job applications end to end, replacing hours of manual daily work.
- MindMesh** – Deployed cross-platform wellness app with agentic AI insights

Node.js, LangChain, LangGraph, FAISS, MongoDB, Firebase, Redis
- Designed and deployed a LangGraph orchestration agent that autonomously decides whether to retrieve from the user’s personal health history, query a wellness knowledge base, or escalate to a more capable model based on query complexity, reducing unnecessary API costs by 35%.
 - Built a hybrid RAG retrieval pipeline combining dense vector search with recency-weighted scoring so recommendations reflect current user state rather than stale historical data; validated output quality end to end using RAGAS faithfulness, answer relevancy, and context precision metrics before every release.
 - Deployed backend handles 1,000+ concurrent users with JWT-secured REST APIs, Redis session caching, Swagger documentation, and offline-first Firebase sync with a human-in-the-loop approval gate before health recommendations surface.
- SkyChoice** – Deployed decision intelligence platform for airline selection

React, TypeScript, Node.js, Express.js
- Deployed full-stack decision support system where a multi-criteria orchestration engine selects the optimal scoring algorithm from TOPSIS, MAUT, VIKOR, PROMETHEE II, SAW, and COPRAS based on traveler risk profile and live route context.
 - Integrated live flight pricing via SerpAPI Google Flights with automatic fallback to BTS 2024 historical baseline, ensuring the system degrades predictably under external API failure rather than returning errors to users.
 - Implemented Monte Carlo simulation with 500 iterations to generate probabilistic sensitivity analysis across 7 weighted criteria, giving users confidence ranges rather than false point estimates.

Education

- Stevens Institute of Technology**

Jan 2025 – May 2026
Hoboken, NJ, USA
- Master of Engineering in Engineering Management, GPA: 4.0
- Coursework: System Design, Product Management, Engineering Economics, Agile Project Leadership, Decision Analysis
- Dayananda Sagar College of Engineering**

Aug 2018 – Jun 2022
Bengaluru, India
- Bachelor of Engineering in Information Science and Engineering, GPA: 3.75
- Coursework: Data Structures and Algorithms, DBMS, Operating Systems, Computer Networks, Machine Learning, Software Engineering
